Resumen. O autor registra em fotos, vídeos e sons *Myrmotherula axillaris* or White-flanked Antwren na Fazenda Country, município de Canavieiras, Bahia, Brasil, 28 e 29 janeiro de 2013. Espécie endêmica da America do Sul. Talvez o primeiro registro para o município.

According literature consulted (below), *Myrmotherula axillaris* or White-flanked Antwren is endemic of South America, but has an large range, occurring in Bolivia (south La Paz, Cochabamba, and w.Santa Cruz, several states of Brazil (Brazilian Amazonia, MatoGrosso, Mato Grosso do Sul, costal Atlantic forest of Pernambuco, Paraíba until south to Rio de Janeiro); Colombia; Costa Rica; Ecuador; French Guiana; Guyana; Honduras; Mexico; Nicaragua; Panama; Peru; Suriname; Trinidad and Tobago; Venezuela.

On January, 28 and 29, 2013, morning about 10am, we (the author and Maurício Arantes de Oliveira, biologist) had the opportunity to observe a couple of this species, foraging in a natural area of Fazenda Country, Canavieiras county, Bahia, Brazil (15° 23' 10.34"S/39° 00'36 27" W). The author recorded by video and photos (bellow), and photos, sound and video available in the Internet (PROGRAMA AMBIENTAL: A ÚLTIMA ARCA DE NOÉ,2013; IBC,2013, YOUTUBE 2013).

After playback the male perched near us when we could observe, photograph and film the white characteristic of the species. In this region occurs *Myrmotherula axillaris luctuosa* Pelzeln, 1868 (IBC,2013,).

This species is very difficult to be filmed or photographed because it normally lives in the middle of forest in a low light and it is moves a lot.

This species was already included in our local list but not with documented records (SANTOS,2013).

www.ultimaarcadenoe.com.br Documented record of *Myrmotherula axillaris luctuosa* in Canavieiras, Bahia, Brazil.

Due to increasing degradation of natural environments and the difficult records of this species, we believe that this documented record in this simple note, can add some more data on this bird, and help your population study.
